Kingery Construction

Date Completed:

August 2015

Location:

Lincoln, NE

General Contractor:

Kingery Construction

Architect

Peace Studio Architects

Size:

## BNSF MATERIAL HANDLING

Ironhide Construction provided a range of construction services on the Kingery Construction shop building project. Ironhide completed structural restoration of an antique building, repair of all deficiencies, as well as erection of a new building. Ironhide also installed insulation, architectural metal wall panels, and a curved architectural metal roof that was 244'x51'. The curved roof made for an exciting and challenging project. Ironhide Construction had to take on the restoration of the antique building originally built in the 1950s, and then remodeled over 10 years ago, without any original drawings for reference.

---

Ironhide Construction is a leading Midwest general contractor and structural restoration company. From design to project management to construction, Ironhide transforms metal into modern, custom buildings that are functional and stylish. Ironhide Construction is also one of only a few companies in the region that specializes in the challenges of structural restoration, as well as develops phased maintenance plans for buildings, parking garages, and other structures. Ironhide approaches every project with transparency, accountability, and quality results from proposal to completion.
