Sampson Construction

Date Completed:

November 2018

Location:

Papillion, Nebraska

General Contractor:

Sampson Construction

Architect

Alley Poyner Macchietto Architectur

Size:

53,000 SF

## PAPILLION FIELD HOUSE PEMB

Papillion Field House is a 53,000 ft<sup>2</sup> indoor soccer facility in Papillion, Nebraska where we provided a Chief Buildings® pre-engineered metal building (PEMB). With this, we provided the entire steel erection of the Field House, making it a full Clearspan building with no obstructions. The building's dimensions are 200 ft wide by 265 ft long. Included in our scope of the project was high R-value insulation in the walls as well as the roof, ontop of a 35' low eave and 50' high eave. Also included is a structural mezzanine for viewing of the second floor. We were a subcontractor to Sampson Construction, who was the General Contractor on this project. The Papillion Field House is our 3rd indoor sports facility that we've worked with Sampson Construction on.

**Project Manager:** Jo Wendt
