## WOOF! DOG CARE CENTER

Woof! Dog Care Center is a project that consisted of a 15,750 SF Pre-Engineered Metal Building. The General Contractor was Hampton Construction. Ironhide erected the building, installed the roof and wall panels, and installed Simple Saver Insulation throughout. The building has some cool architectural features such as two glass clerestories on the roof, as well as a large soffitted overhang entrance. The contrasting stone masonry and the red metal panels gave this building a unique stylish look that we are proud to show off.
