## US BANK SIOUX FALLS PARKING

The US Bank parking garage in Sioux Falls, South Dakota, was on the verge of being condemned. Ironhide Construction teamed up with US Bank, McGill Restoration and SDG of Lincoln to devise a plan to save the structure. This included removal of the top deck of concrete, installation of a new deck and concrete, high grade traffic coating system, structural steel restoration at all T-panel connection points, and cleaning and resealing of all the structural site on site.

This was a very complex project with a lot of planning and coordination.

---

Ironhide Construction is a leading Midwest general contractor and structural restoration company. From design to project management to construction, Ironhide transforms metal into modern, custom buildings that are functional and stylish. Ironhide Construction is also one of only a few companies in the region that specializes in the challenges of structural restoration, as well as develops phased maintenance plans for buildings, parking garages, and other structures. Ironhide approaches every project with transparency, accountability, and quality results from proposal to completion.
