NANG-CATS SIM BUILDING FIRE

This project consists of a 2,355 SF, ground-up, Pre-engineered Metal Building. The Sim Building Fire Truck Bay Addition started at the beginning of November 2019, we are excited, to be the general contractor throughout this project. Thank you to all of our subcontractors for helping us accomplish this project. Since a ground-up construction project is constructing a building completely from scratch, we're able to personalize everything from the walls, footings, foundations, and everything in between.
Project Manager: Chad Aldrich
