Omaha, NE

General Contractor:
Ironhide Construction

Architect
MBCI

Size:
120' x 120'

MILLARD AIRPORT HANGAR

Millard Airport Hangar was a structural restoration project that we were the general contractor on. This building was 120' x 120' in which we installed roof hugger retrofit solutions. During this project we used the roof hugger retrofit approach to install insulation and new metal panels over the old roof, this approach is a little more cost effective. Check out the video to hear what Jeff has to say about the details on this project.
