CITY OF LINCOLN POLE BUILDING

Ironhide Construction was the general contractor on the City of Lincoln Pole Building which included a 30' W x 36' x 16' high addition to an existing post frame building. This job included cutting concrete and removing it for each of the poles. This building was on an existing slope of concrete slab, due to the slope of the concrete we had to make custom base trim to follow the sloped floor. This new building was connected structurally to the existing one, which included a watertight roof and wall panel connections.
Project Manager: Chad Aldrich

Ironhide Construction is a leading Midwest general contractor and structural restoration company. From design to project management to construction, Ironhide transforms metal into modern, custom buildings that are functional and stylish. Ironhide Construction is also one of only a few companies in the region that specializes in the challenges of structural restoration, as well as develops phased maintenance plans for buildings, parking garages, and other structures. Ironhide approaches every project with transparency, accountability, and quality results from proposal to completion. Visit IronhideConstruction.com for more information.
