BNSF Railway

Date Completed:  
March 2016

Location:  
Lincoln, NE

General Contractor:  
Ironhide Construction

Architect  
TKDA

Size:

## BNSF FABRICATION SHOP EAST

Ironhide Construction assisted BNSF Railway with structural restoration of its fabrication shop. We removed the existing exterior wall panels, demolished the 80'x15' sliding crane door, as well as all of the structural steel and footings. Once demo was completed we installed the new footing system along with the entirely new structural steel system that would support the new end wall. We installed a new 80'x14' hydraulic crane door with two 16'x12' sliding lower doors. The entire end wall was covered with insulated metal wall panels to create a much more energy efficient as well as safe working door to allow the railroad to move materials in and out of the building. This highly complex project for BNSF Railway required use of every aspect of our construction services at Ironhide Construction.

---

Ironhide Construction is a leading Midwest general contractor and structural restoration company. From design to project management to construction, Ironhide transforms metal into modern, custom buildings that are functional and stylish. Ironhide Construction is also one of only a few companies in the region that specializes in the challenges of structural restoration, as well as develops phased maintenance plans for buildings, parking garages, and other structures. Ironhide approaches every project with transparency, accountability, and quality results from proposal to completion.
